# Internet Protocol Version 4 (TCP/IPv4) Properties

## General

You can get IP settings assigned automatically if your network supports this capability. Otherwise, you need to ask your network administrator for the appropriate IP settings.

☐ Obtain an IP address automatically

☒ Use the following IP address:

IP address:

192 . 168 . 1 . 254

Subnet mask:

255 . 255 . 255 . 0

Default gateway:

192 . 168 . 1 . 1

☐ Obtain DNS server address automatically

☒ Use the following DNS server addresses:

Preferred DNS server:

192 . 168 . 1 . 1

Alternate DNS server:

. . .

☐ Validate settings upon exit

Advanced...

OK

Cancel

## Before You Begin

### Before You Begin

#### Server Roles

#### Confirmation

#### Progress

#### Results

This wizard helps you install roles on this server. You determine which roles to install based on the tasks you want this server to perform, such as sharing documents or hosting a Web site.

Before you continue, verify that:

- The Administrator account has a strong password
- Network settings, such as static IP addresses, are configured
- The latest security updates from Windows Update are installed

If you have to complete any of the preceding steps, cancel the wizard, complete the steps, and then run the wizard again.

To continue, click Next.

## Select Server Roles

Before You Begin

**Server Roles**

Active Directory Domain Services

Confirmation

Progress

Results

Select one or more roles to install on this server.

Roles:

- ☐ Active Directory Certificate Services
- ☒ **Active Directory Domain Services**
- ☐ Active Directory Federation Services
- ☐ Active Directory Lightweight Directory Services
- ☐ Active Directory Rights Management Services
- ☐ Application Server
- ☐ DHCP Server
- ☐ DNS Server
- ☐ Fax Server
- ☐ File Services
- ☐ Hyper-V
- ☐ Network Policy and Access Services
- ☐ Print and Document Services
- ☐ Remote Desktop Services
- ☐ Web Server (IIS)
- ☐ Windows Deployment Services
- ☐ Windows Server Update Services

Description:

[Active Directory Domain Services \(AD DS\)](#) stores information about objects on the network and makes this information available to users and network administrators. AD DS uses domain controllers to give network users access to permitted resources anywhere on the network through a single logon process.

## Welcome to the Active Directory Domain Services Installation Wizard

This wizard helps you install Active Directory Domain Services (AD DS) on this server, making the server an Active Directory domain controller. To continue, click Next.

☐ Use advanced mode installation

Learn more about the additional options that are available in [advanced mode installation](#).

More about [Active Directory Domain Services](#)

< Back

Next >

Cancel

## Choose a Deployment Configuration

You can create a domain controller for an existing forest or for a new forest.

☐ Existing forest

☐ Add a domain controller to an existing domain

☐ Create a new domain in an existing forest

This server will become the first domain controller in the new domain.

☒ Create a new domain in a new forest

More about [possible deployment configurations](#)

< Back

Next >

Cancel

## Name the Forest Root Domain

The first domain in the forest is the forest root domain. Its name is also the name of the forest.

Type the fully qualified domain name (FQDN) of the new forest root domain.

FQDN of the forest root domain:

Example: corp.cortoso.com

< Back

Next >

Cancel

## Set Forest Functional Level

Select the forest functional level.

Depending on the version, preferably  
set this in the current version

Forest functional level:

Windows Server 2008 R2

### Details:

The Windows Server 2008 R2 forest functional level provides all the features that are available in the Windows Server 2008 forest functional level, plus the following additional feature:

- Recycle Bin, which, when it is enabled, provides the ability to restore deleted objects in their entirety while Active Directory Domain Services is running.

Any new domains that are created in this forest will operate by default at the Windows Server 2008 R2 domain functional level.

You will be able to add only domain controllers that are running Windows Server 2008 R2 or later to this forest.

More about [domain and forest functional levels](#)

< Back

Next >

Cancel

## Additional Domain Controller Options

Select additional options for this domain controller.

DNS server

Global catalog

Read-only domain controller (RODC)

Additional information:

The first domain controller in a forest must be a global catalog server and cannot be an RODC.

We recommend that you install the DNS Server service on the first domain controller.

More about [additional domain controller options](#)

< Back

Next >

Cancel

## Active Directory Domain Services Installation Wizard

A delegation for this DNS server cannot be created because the authoritative parent zone cannot be found or it does not run Windows DNS server. If you are integrating with an existing DNS infrastructure, you should manually create a delegation to this DNS server in the parent zone to ensure reliable name resolution from outside the domain "domain.sdsc.edu". Otherwise, no action is required.

Do you want to continue?

Yes

No

## Location for Database, Log Files, and SYSVOL

Specify the folders that will contain the Active Directory domain controller database, log files, and SYSVOL.

For better performance and recoverability, store the database and log files on separate volumes.

Database folder:

Log files folder:

SYSVOL folder:

More about [placing Active Directory Domain Services files](#)

**Directory Services Restore Mode Administrator Password**

The Directory Services Restore Mode Administrator account is different from the domain Administrator account.

Assign a password for the Administrator account that will be used when this domain controller is started in Directory Services Restore Mode. We recommend that you choose a strong password.

Password:

Confirm password:

More about [Directory Services Restore Mode password](#)

< Back

Next >

Cancel

## Summary

Review your selections:

Configure this server as the first Active Directory domain controller in a new forest.

The new domain name is "domain.sdsc.edu". This is also the name of the new forest.

The NetBIOS name of the domain is "DOMAIN".

Forest Functional Level: Windows Server 2008 R2

Domain Functional Level: Windows Server 2008 R2

Site: Default-First-Site-Name

To change an option, click Back. To begin the operation, click Next.

These settings can be exported to an answer file for use with other unattended operations.

DHCP Server

Network Connection Bindings

IPv4 DNS Settings

IPv4 WINS Settings

DHCP Scopes

**DHCPv6 Stateless Mode**

DHCP Server Authorization

Confirmation

Progress

Results

DHCP Server supports the DHCPv6 protocol for servicing IPv6 clients. Using DHCPv6, clients can automatically configure their own IPv6 addresses using stateless mode, or they can acquire IPv6 addresses in stateful mode from the DHCP server. If routers on your network are configured to support DHCPv6, verify that your selection below matches the router configuration.

Select the DHCPv6 stateless mode configuration for this server.

☐ Enable DHCPv6 stateless mode for this server

IPv6 clients will be automatically configured without using this DHCP server.

☒ Disable DHCPv6 stateless mode for this server

After installing DHCP Server, you can configure the DHCPv6 mode using the DHCP Management console.

[More about DHCPv6 stateless mode](#)
